

Carriage Roller

Carriage Rollers - Carriage rollers are specially designed bearings that are utilized on lift masts in order to help them perform in challenging environmental surroundings. Lift masts are normally subjected to oscillations, shocks, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences such as heat, dust, cold, contamination, aggressive ambient air and moisture. Therefore, the guidance arrangements of lift masts must be particularly tough and have a certain high load carrying capability.

To help compete in numerous various environmental conditions, carriage rollers were designed for lots of lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
